Cyclolab Ltd. is an independent SME. This Laboratory - originally one of the research laboratories of the Chinoin Pharm. and Chem. Works, (Budapest) started the cyclodextrin research in 1972, and in 1992 it became a small, independent private service provider company.

Formerly the main activity of the firm was the early phase R. and D. activity (on contractual basis) for the development of new processes and products applying cyclodextrins in the pharmaceutical, food and cosmetic industry as well as in biotechnology, environmental field, and nanosciences. During the last decade CycloLab expanded its activities toward the cGMP-compliant pharmaceutical manufacturing. The company has manufacturing authorization for pharmaceuticals (parenteral excipients, APIs) at 100 kg/batch scale based on FDA-approved DMF.

CycloLab manufactures and sells over 100 cyclodextrin derivatives for research purposes as well as for fine chemical suppliers in Europe, USA, Far East and Australia. CycloLab runs state of art carbohydrate-oriented synthetic laboratories for small and large scale synthesis of various cyclodextrin derivatives. The analytical quality control background is ensured by dedicated GC, HPLC, capillary electrophoresis Labs, and dynamic light scattering stations. CycloLab has 8 PhD researchers in the staff most of them internationally acknowledged experts in this field.
